                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBMITTED (DEC-1998) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: RESPONSIBLE FOR META CLEAVAGE OF THE FIRST AROMATIC RING OF 2,2,3-TRIHYDROXYBIPHENYL. 2,2,3-TRIHYDROXYDIPHENYL. 2,2,3-TRIHYDROXYDIPHENYL. 2,2,3-TRIHYDROXYDIPHENYL. ETERS, CATECHOL, 3-METHYLCATECHOL, AND 4-METHYLCATECHOL ARE OXIDIZED LESS EFFICIENTLY AND 3,4-DIHYDROXYBIPHENYL. IS OXIDIZED CONSIDERABLY LESS EFFICIENTLY.
-!- COFACTOR: FERROUS ION:
-!- PATHWAY: KEY ENZYME IN THE DEGRADATION PATHWAYS OF DIBENZO-P-DIOXIN AND DIBENZOFURAN (SECOND STEP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                catabolism; Iron.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS
                                                                                     Genes were identified by a combination of several methods: Gene prediction programs including Fgenesh (http://www.softberry.com/), genscan and Genesan+ (Chris Burge, http://www.softberry.com/), http://CCR-081.mit.edu/GENGAN.html), GeneMarkHWM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mperteactigr.cog), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tg1.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, Simple repeats are hittp://genome.wustl.edu/eddy/tRNAscan-SE). Simple repeats are hittp://fenome.wustl.edu/eddy/tRNAscan-SE). Simple repeats are hittp://fenome.wustl.edu/eddy/tRNAscan-SE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GEDNTENGEDDTNGAARYFESTTARAQNOTTGVAVAVREEL

```
New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gene; homologue; Triticum aestivum; wheat; growth inhibition; agonist; glbberellin; dwarf phenotype; glbberellin blosynthesis;

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibitnon is antegonised by glabbarellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with glabberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild type, the dwarfing being glabberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit glabberellin blosynthesis, such as paclobutazol, e.g. to allow use of a glabberellin blosynthesis inhibitor to keep weeds

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Tritiuum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by the plant. This growth inhibition is antagonised by is because it is a conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin blosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents
may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence was obtained after partially sequencing wheat Rht clone 14al.
                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             which

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants

New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antegonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin blosynthesis, such as pactobutrazol, e.g. to allow use of a gibberellin blosynthesis inhibitor to keep weeds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        dwarf but let crop plants grow tall. The present sequence represents the composite DNA sequence of wheat Rht gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis, such as paclobutrazol, dwarf but let crop plants grow tall. The present sequence was dwarf but let crop plants grow tall. The present sequence was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes polypeptides encoded by the Rht gene (and 15 homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by growth of the plant. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with glaberallin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being glaberallin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit glaberallin blosynthesis, such as paclobutrazol, e.g. to allow use of a glaberallin blosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents rice expressed sequence tag (BST) AAD39460, which is homologous to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Trilicum Asstivum, inhibit growth of the plant. This growth inhibition is antagonised by gluberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by the product scan be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gluberellin. Insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gluberellin blosynthesis, such as paclobutrazol, e.g. to allow use of a gluberellin blosynthesis, such as paclobutrazol, dwarf but let crop plants grow tall. The present sequence represents the partial cDNA sequence of rice AAD39460 (a wheat Rht gene homologue).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                       New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rht gene; homologue; Triticum aestivum; wheat; growth inhibition; antagonist; gibberellin; dwarf phenotype; gibberellin biosynthesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth inhibition is antagonised by growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis, such as paclobutrazol, dwarf but let crop plants grow tall. The present sequence was dwarf dwarf but let repartially sequencing wheat Rht clone 14al.

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by its qibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with used to produce Rht mutant plants which are dwarfed compared with may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis annibitor to keep weeds dwarf but let crop plants grow tail. The present sequence represents the partial sequence of the wheat rht-10 allele.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

  Preparation of N-substituted azetidinone, useful as intermediate for clavulanic acid, by cyclisation of N-substituted aminopropanoic acid in presence of beta-lactam synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence encodes an beta-lactam synthetase polypeptide. The enzyme is encoded by orf3 of the clavulanic acid biosynthesis cluster. This enzyme converts a beta-anino acid (formed from arginine and pyruvate) into the beta-lactam form, early in the clavulanic acid biosynthesis pathway. The beta-lactam synthetase enzyme is used for 2-aminopropanoic acid derivatives. The method is particularly used to make (25)-5-quanidino-2-(2-oxo-azetidin-1-yl)pentanoic acid from N2-(2-carboxyethyl)-(5)-arginine. (25)-5-quanidino-2-(2-oxo-azetidin-1-yl)pentanoic acid is an intermediate for clavulanic acid, a known inhibitor of beta-lactamase, used in combination with beta-lactam antibiotics for treatment of infections. More generally, N-substituted azetidinones are intermediates for other clavulams and

A library of S. clavuligerus NRRL 5741 genomic DNA fragments (15-22 kb) constructed in cosmid pLAFR3 was screened for the cla gene using a probe based on a partial N-terminal sequence from the CLA enzyme. Isolated clone K6L1 included a 15kb fragment having the sequence given in AAQ91580 that included the cla gene (ORF4).

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by globerellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by the conferring a dwarf phenotype on a plant which is correctable used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being globerellin-insensitive. Taller plants wild-type, the dwarfing being globerellin-insensitive. Taller plants the plant of interest. Plants may be made which are resistant to compounds which inhibit globerellin blosynthesis, such as paclobutrazol, e.g. to allow use of a globerellin blosynthesis, such as paclobutrazol, e.g. to allow use of a globerellin blosynthesis, such as paclobutrazol, dwarf but let crop plants grow tall. The present sequence was obtained after partially sequencing wheat Rht clone 14al.

/lab.host="E. coli strain XLOLR"
/note="Vector: pBK-CWV; Site_1: ECORI; Site_2: Xhol; This cDNA library was constructed from polyA+ enriched mRNA from green seed coats in mid to late developemental stage, average fresh weight 250 mper seed. Traces of pod and embryo tissue also present. Complementary DNA was synthesized from mRNA using an Xhol-poly(dT) linker-primer. ECORI adopters were ligated to the blunt-ended cDNA fragments and the products were digested with Xhor for directional cloning into lambda ZAP Express vector. This lambda library was amplified once using E. coli host strain XL1 Blue MRF'. Inserts were then subcloned by mass excision using ExAssist helper phage for strain XL1 blue MRF'. Inserts were then strain XL1 blue MRF'. Inserts were then strain XL1 blue MRF'. Inserts were then strain XL0 blue MRF'. Inserts were then strain XL0 blue XF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,

/note="Vector: pBK-CWV; Site_1: EcoRI; Site_2: XhoI; This
cDNA library was constructed from polyA+ enriched mRNA
from green seed coats in mid to late developemental stage
, average fresh weight 250 mg per seed. Traces of pod and
embryo tissue also present. Complementary DNA was
synthesized from mRNA using an XhoI-poly(dT)
linker-primer. EcoRI adopters were ligated to the
blunt-ended crom mRNA using an AnoI-poly(dT)
linker-primer. EcoRI adopters were ligated to the
blunt-ended crom mRNA using and the products were digested
with XhoI for directional cloning into lambda 2AP Express
vector. This lambda library was amplified once using E.
coll host strain XLI Blue MRF'. Inserts were then
subcloned by mass excision using ExAssist helper phage for
conversion into phagemid vector pBK-CWY in E. coli host
strain XLOLR."

```

```
XhoI; Plants were grown in an aeroponic chamber for 14 days on nitrogen-rich medium followed by 3 days on N-free medium. RNA was extracted from root tips (1-3 cm). cDNA was prepared from polyA+ enriched RNA. The cDNA was directionally ligated into Uni-zapXR vector from Stratagene and packaged using Giapack Gold packaging extracts. Plasmids containing cDNA inserts were mass-excised from phage stocks using ExAssit helper phage and propagated in SOLR cells. Clone ordering and sequencing was performed by the Centre National de Sequencage (Genoscope, Evry, France)."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 401,
